WEB DEVELOPMENT PROJECT REPORT

Three Projects: Description, Sample Source Code, Outputs and Conclusions

Projects included

1. Personal Profile Website
2. College Admission Website
3. Online Learning Platform (LearnHub)

Prepared using the project screenshots provided. The code samples in this report are illustrative implementations based on the visible pages and features; they are not claimed to be the original source files.

Project 1: Personal Profile Website

A personal portfolio introducing the creator, education, skills and work.

1. Introduction and Description

The Personal Profile Website presents a student's profile in a simple, organised portfolio. Visitors can move between the Home, About Me, Education, Skills, Projects and Contact sections using the navigation menu.

2. Main Features

• Home section with a short introduction and welcome message.

• About Me section describing background and interests.

• Education section listing academic qualifications.

• Skills section showing technical skills such as HTML, CSS, JavaScript and Python.

• Projects section presenting example work, including the College Admission and Online Learning projects.

• Contact section with fields for name, email, phone number and message.

3. Technologies Used

HTML for page structure and content; CSS for layout, colours, spacing and responsive presentation. The forms shown are front-end examples; processing submissions would require suitable backend or form-service integration.

4. Sample Source Code

The following compact example demonstrates the main page structure and styling approach for this project. It can be expanded into separate files and additional pages.

```
<!-- index.html: illustrative starter implementation -->
<!DOCTYPE html>
<html lang="en">

6. Conclusion

The Personal Profile Website provides a clear online introduction and organises personal information into easy-to-find sections. It demonstrates the use of HTML and CSS to create a structured, user-friendly portfolio.

Overall, this project demonstrates practical front-end web development skills, including page structure, navigation, content organisation, reusable styling and user-interface design.

Project 2: College Admission Website

A college information website for prospective students and visitors.

1. Introduction and Description

The College Admission Website provides essential information about Dr. RVR NRI University / Dr. RVR NRI Institute of Technology. The pages introduce the institution, explain its vision and mission, list courses and faculty, and provide a contact form for enquiries.

2. Main Features

• Home page with a welcome banner and an Apply Now call to action.

• Why Choose Our College section highlighting education quality, facilities and career development.

• About page with college overview, vision and mission.

• Courses page presenting available programmes, including Computer Science, AI and Machine Learning, Information Technology and related streams.

• Faculty page introducing teaching staff.

• Contact page with address/contact information and an enquiry form.

3. Technologies Used

HTML for page structure and content; CSS for layout, colours, spacing and responsive presentation. The forms shown are front-end examples; processing submissions would require suitable backend or form-service integration.

4. Sample Source Code

The following compact example demonstrates the main page structure and styling approach for this project. It can be expanded into separate files and additional pages.

```

Project 2: College Admission Website – Output Screenshot 8

6. Conclusion

The College Admission Website brings important institutional information together in one place. Its course, faculty, admission and contact sections can help prospective students understand the college and find the next step for enquiries.

Overall, this project demonstrates practical front-end web development skills, including page structure, navigation, content organisation, reusable styling and user-interface design.

Project 3: Online Learning Platform (LearnHub)

A learning portal for browsing courses, instructors and lesson progress.

1. Introduction and Description

LearnHub is an online learning platform concept that helps learners explore courses and continue their studies through a dashboard. The screenshots show a landing page, course catalogue, course cards, instructor profiles, a learning dashboard, lesson content and a contact page.

2. Main Features

• Landing page with a learning-focused headline and a call to action.

• Course catalogue with course cards such as Python Programming, HTML and CSS, and introductory AI.

• Instructor section with profiles of teaching staff.

• My Learning Dashboard showing enrolled courses and progress indicators.

• Course lesson pages with lesson lists and sample HTML/CSS content.

• Contact page and message form for learner enquiries.

3. Technologies Used

HTML for page structure and content; CSS for layout, colours, spacing and responsive presentation. The forms shown are front-end examples; processing submissions would require suitable backend or form-service integration.

4. Sample Source Code

The following compact example demonstrates the main page structure and styling approach for this project. It can be expanded into separate files and additional pages.

```
<!-- index.html: illustrative starter implementation -->

6. Conclusion

LearnHub demonstrates how an online learning portal can organise course discovery, instructor information and learner progress. The dashboard and lesson views provide a foundation for a more complete learning management system.

Overall, this project demonstrates practical front-end web development skills, including page structure, navigation, content organisation, reusable styling and user-interface design.
